

## Density detective

Use your detective skills to find the identity of the mystery objects. First calculate the density of the object. Then use the Table of Densities to decide what the object is made of.

Table of Densities

| Solids | Density $\left(\mathbf{g} / \mathbf{c m}^{\mathbf{3}}\right)$ | Solids | Density $\mathbf{( g / \mathbf { c m } ^ { \mathbf { 3 } } )}$ |
| :--- | :--- | :--- | :--- |
| marble | 2.56 | copper | 8.92 |
| quartz | 2.64 | gold | 19.32 |
| diamond | 3.52 | platinum | 21.4 |

| 1. | While digging in the backyard, you <br> find an old coin. Its mass is |
| :--- | :--- |
|  | 26.76 g and its volume is $3 \mathrm{~cm}^{3}$. |
| What is the density of the coin? |  |

Calculation:
2.

You think you have found a diamond. Its mass is 5.28 g , and its volume is $2 \mathrm{~cm}^{3}$. What is the density of the object?

Calculation:

What is the coin made of? $\qquad$ per

Calculation:
$m=107 \mathrm{~g}$
$V=5 \mathrm{~mL}$ (water went from 10 mL to 15 mL )

$$
D=\frac{m}{v}=\frac{107 \mathrm{~g}}{5 \mathrm{~mL}}=21.4 \frac{9}{\mathrm{~mL}}
$$

What is the ring made of? platinum

What did you find? $\qquad$ quartz

| 4.There is a block on your desk that <br> acts as a paperweight. Its measure- <br> tents are: 3 cm by 4 cm by <br> 6 cm . The block has a mass of <br> 184.32 g . What is the density of <br> the block? |
| :--- |

Calculation: $m=184.32 \mathrm{~g}$
$V=72 \mathrm{~cm}^{3}\left(\begin{array}{rl}v & =\ell \cdot w \cdot h \\ & =6 \mathrm{~cm} \cdot 4 \mathrm{~cm} \cdot 3 \mathrm{~cm}) \\ & =72 \mathrm{~cm}^{3}\end{array}\right)$

$$
\begin{aligned}
& D=\frac{m}{V} \quad=72 \mathrm{~cm} \\
& D=\frac{184.329}{72 \mathrm{~cm}^{3}}=2.56 \frac{9}{\mathrm{~cm}^{3}}
\end{aligned}
$$

What is the block made of? Marble
