Slope and Rates

Relating Decimals, Percents, and Fractions

- Complete each row in the chart by expressing the same number in different ways.

Decimal	Percent	Fraction in lowest terms
0.75	75%	$\frac{75}{100} = \frac{75 \div 25}{100 \div 25}$ $= \frac{3}{4}$
0.4		
	60%	
		$\frac{1}{8}$

Hint

To write a fraction in lowest terms, divide the numerator and the denominator by their greatest common factor.

Writing Ratios in Lowest Terms

A ratio compares two numbers. A ratio is in lowest terms if the numbers have no common factors.

14:35 is not in lowest terms because 7 is a factor of both numbers.

$$14 \div 7 = 2 \text{ and } 35 \div 7 = 5$$

$$14:35 = 2:5, \text{ in lowest terms}$$

Hint

Writing a ratio as a fraction can help you write it in lowest terms.

$$14:35 = \frac{14}{35}$$

$$= \frac{2}{5}$$

$$= 2:5$$

- Write each ratio in lowest terms.

a) $20:15 = 4:$

d) $12:36 =$ _____

b) $3:18 =$ _____

e) $16:40 =$ _____

c) $50:40 =$ _____

f) $42:24 =$ _____

Converting Measurements

3. a) $2.5 \text{ h} =$ _____ min

c) $8 \text{ yd} =$ _____ ft

b) $2.1 \text{ km} =$ _____ m

d) $0.2 \text{ L} =$ _____ mL

Hint

Use the charts inside the back cover of the Workbook.

Working with Integers

- Sometimes, it helps to think about what the operation means.
 $3 \times (-4)$ means “3 groups of (-4) .”
 $3 \times (-4) = -12$
- Sometimes, it helps to think about opposites.
 $10 \div 5 = 2$, so $10 \div (-5)$ must be the opposite.
 $10 \div (-5) = -2$
- Sometimes, it helps to think about the related operation.
 For $-14 \div (-2)$, think about the related multiplication.
 $7 \times (-2) = -14$, so $-14 \div (-2) = 7$

Hint

When you multiply or divide two integers with the same sign, the result is positive.

$$\begin{aligned} 3 \times 4 &= 12 \\ -3 \times (-4) &= 12 \\ 12 \div 4 &= 3 \\ -12 \div (-4) &= 3 \end{aligned}$$

4. Multiply or divide.

- a) $6 \times (-3) = \underline{\hspace{2cm}}$ d) $-24 \div 8 = \underline{\hspace{2cm}}$
 b) $-4 \times 8 = \underline{\hspace{2cm}}$ e) $30 \div (-5) = \underline{\hspace{2cm}}$
 c) $-6 \times (-7) = \underline{\hspace{2cm}}$ f) $-27 \div (-3) = \underline{\hspace{2cm}}$

Think of a number line to subtract with integers.

5. Subtract.

- a) $12 - 8 = \underline{\hspace{2cm}}$ d) $4 - (-3) = \underline{\hspace{2cm}}$
 b) $3 - 6 = \underline{\hspace{2cm}}$ e) $-10 - (-6) = \underline{\hspace{2cm}}$
 c) $-5 - 8 = \underline{\hspace{2cm}}$ f) $-12 - (-15) = \underline{\hspace{2cm}}$

Calculating Tangents

6. Calculate the tangent for each angle of elevation.

$$\tan x^\circ = \underline{\hspace{2cm}}$$

$$\tan t^\circ = \underline{\hspace{2cm}}$$

Hint

$$\tan A^\circ = \frac{\text{opposite}}{\text{adjacent}}$$
